

Private Networks

Beyond Wi-Fi: Building the Next Generation of Private Networks

4G LTE and 5G technologies have transformed what's possible with private networks. And today's businesses, enterprises and government organizations are turning to private networks for all kinds of reasons. Some need to securely support critical communication requirements. Others are relying on private networks to cost-effectively meet ever-growing capacity needs. Whatever the reasons, private networks provide a huge leap forward in network convenience and flexibility. Inseego's highly secure and reliable network devices support next-generation private networks, enabling businesses and organizations to reimagine the possibilities of large area networking while containing costs.

Inseego Helps Optimize Private Networks

Modems

High-speed, secure and rugged Skyus modems deliver cost-effective primary connections and include options that are ideally suited for industrial internet of things (IIoT) applications and 24-hour operation in harsh environments..

Mobile Hotspot

Secure solutions for public safety with options that connect up to 30 devices and support multi-gigabit 5G and 4G LTE speeds.

Gateways and Routers

Reliable, secure, enterprise-grade devices designed to support data-intensive and mission-critical use cases.

Device Management

Centralized telco-grade device management provides instant, secure visibility into your Inseego devices and simplifies troubleshooting and ongoing maintenance and management.

How Can Inseego Private Network Solutions Help You?

Here are some of the top use cases that Inseego supports:

- Public safety networks
 - Sports and entertainment venue networks
 - Oil and gas networks
 - Factory and warehouse networks
 - Industrial Internet of things
 - Enterprise and campus networks
 - Military communications
 - Smart grid security
- Deep product range with solutions for harsh environments
 - Cost-effective, secure, reliable, and fast cellular connections, including Sub-6 and mmWave 5G options
 - Support for CBRS 3.5 GHz band
 - MulteFire Support
 - First responder support
 - Easy monitoring and management

Driving Rapid Advancements In Private Networks

Inseego, which has spearheaded a number of important 4G and 5G technology breakthroughs, is the leader in private network technology innovation. Not only was Inseego among the first vendors to develop and offer 5G-based products, but we were part of Verizon's initial 5G launch. We have also worked closely with Qualcomm and major infrastructure vendors and instrument providers to develop cutting-edge 5G solutions. If you're ready to build a secure next-generation private network, look no further than Inseego.

Learn more about how you can use Inseego devices to unleash the full potential of your private networks. Contact Inseego today.
