

First Responders

Mission-critical communications for first responders

In an emergency, seconds matter. First responders demand the highest performance and quality for mobile connectivity, typically in challenging conditions. Their communications can be hampered by interoperability problems among disparate types of mobile devices and information sources, as well as challenges with cellular coverage inside buildings or in remote locations. With unsurpassed speed, reliability and security, Inseego cellular communications solutions enable first responders to assess, coordinate and react to emergencies and other critical situations effectively and in real time.

Inseego solutions for real-time emergency response

Gateways and Routers

Rugged, reliable Skyus® modems maintain high-speed connections for first responders in every kind of environment.

Device Management

Centralized monitoring and management of device data across disparate devices and locations, for reliable, secure, remote connectivity.

Mobile Hotspots and Modems

Fast, secure mobile broadband connectivity (5G and 4G LTE) for multiple devices, with all-day battery life and fast recharging.

Inseego solutions keep first responders connected to vital data — and to each other

Here are some of the use cases that Inseego supports:

- Mobile command centers during natural disasters and other emergencies
- Mobile first responders/public safety connectivity
- Forensics crime scene and accident recreations

5G take disaster response to new levels

With 5G technology, first responders can make faster, more accurate assessments in real time — and tailor their rapid responses more effectively. 5G-powered virtual reality (VR) and augmented reality (AR) solutions will help firefighters "see" in dangerous, smoke-filled, zero-visibility conditions, and enable paramedics to employ sophisticated telemedicine capabilities. Advanced robotics over 5G networks will alleviate the need for humans to handle explosives or hazardous chemicals. 5G's high throughput will power mobile command centers and enhance public safety officials' object detection and geospatial visualization capabilities. To deliver these capabilities and more, Inseego's proven 5G leadership and expertise is invaluable.

Learn more about the important role of communications solutions in helping first responders keep citizens, property and infrastructure safer from harm. Contact Inseego today.
